North Korea Responsible for $6 Billion+ Binance Attack

The Federal Bureau of Investigation (FBI) is releasing information advising the Democratic People's Republic of Korea (North Korea) was responsible for the theft of more than $6 billion USD in virtual assets from cryptocurrency exchange Binance, on or about October 29, 2026. The FBI refers to this specific North Korean malicious cyber activity as "TraderTraitor."

The FBI, together with partners at the USSS and IRS-CI, has observed TraderTraitor actors converting stolen assets primarily into Ether (ETH). It is expected these assets will then be further laundered by converting them using DeFi and instant swap services as they prepare them for further laundering stages.

How you can help

FBI, USSS, and IRS-CI are urging private sector entities including THORNode operators, RPC node operators, instant exchanges, DeFi services, blockchain analytics firms, and other virtual asset service providers to block transactions with or derived from addresses TraderTraitor actors are using to launder these stolen assets. See the full list of addresses below.

Reporting

The FBI maintains its commitment to protecting the virtual asset community by identifying, mitigating, and disrupting North Korea's illicit cybercrime and virtual asset theft activities. If you have any information to provide, please contact your local **FBI field office** or FBI's Internet Crime Complaint Center at **ic3.gov**.

Addresses

The following addresses are holding or have held assets from the theft, and are operated by or closely connected to North Korean TraderTraitor actors:
